

## **RETINAL OPTOMAP SCAN**

Patient \_\_\_\_\_ Acct# \_\_\_\_\_

As part of your visit your doctor is prescribing an Optomap retinal image, the latest advancement in providing comprehensive eye examinations.

The Optomap retinal image allows early detection of most problems before they can harm or even destroy your vision by allowing your doctor an unprecedented view of the retina (back of the eye). Your retina is like film in a camera; even the slightest defect can ruin your photograph.

### ***Benefits of Optomap***

- Allows your doctor to diagnose many medical disorders including macular degeneration, high blood pressure, diabetes, retinal holes and detachments.
- Eliminates the need to dilate your eyes during **most** routine exams.
- It is painless, quick and thorough (documents up to 95% of your retina in 1/4 second). The Optomap retinal image gives your eye doctor a much larger view than conventional eye exam equipment.
- Your eye doctor will view your Optomap with you today. These permanent digital images of your retinas can be referred to in the future, allowing your doctor to monitor changes in your health.

As with many advanced medical technologies, insurance will not cover this diagnostic screening. The fee for the Optomap is \$35. We will collect this fee along with your co-payment and deductibles at the end of today's visit.

By signing this form you are consenting to have the Optomap Retinal Scan performed as part of today's eye exam.
